

## 1. Multi-Page Responsive Website

Objective: create a static, responsive, multi-page website. build at least 3 pages — but if you're enjoying the process, just build more!

## 2. Small Quiz Game

Objective: Create a ~~JavaScript/jQuery~~ JavaScript/jQuery quiz game that takes multiple answers and shows a result to the user.

Start with creating a simple game that asks 4 multiple choice questions. Using those questions, assign them a value which will point to an outcome.

## 3. Re-create Giphy with its Own API

Objective: Create a web app which uses a search input and display gifs on a page.(Hint: Giphy's API)

- Displays trending gifs on app load shown in a column/grid.
- Has an input which allows you to search for specific gifs.
- At the bottom of the results, there is a 'load more' button, which gets more gifs using that search term.

As your application begins to get more complex, you'll also need to think about where you put data within your app and how you organize it.

## 4. Let's turn your idea into a scalable business!

full product development for startups and innovative companies.

## 5. Chat Server

Design a chat server that should be capable of transferring at least (png, pdf, docx file). You need to build two separate pieces of software - the client which will run on the mobile device and the server which will handle message delivery. The client is the part that runs on the device. It should have standard screens like the user profile screen, conversations screen, messaging screen etc...

- 6. Online Storage Drive (Replica of Google drive)**
- 7. Freelancing (Job Seekers and Job Providers)**
- 8. Job vacancies and apply option**
- 9. Government Works Listing and review website**
- 10. World Happy Index website**
- 11. Alumni Documents Applying Portal**
- 12. UTU Events notifications**
- 13. Personal Vehicle cab**
- 14. Women Security web app**
- 15. Education Portal (Tutorials, notes) using machine learning**
- 16. E-Rickshaw cab (Uber rickshaw)**
